# AXIAL PISTON PUMPS SERIES PVPLUS

Design Series 47  
Variable Displacement

## **WARNING – USER RESPONSIBILITY**

**FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.**

This document and other information from Parker-Hannifin Corporation, its subsidiaries and authorized distributors provide product or system options for further investigation by users having technical expertise.

The user, through its own analysis and testing, is solely responsible for making the final selection of the system and components and assuring that all performance, endurance, maintenance, safety and warning requirements of the application are met. The user must analyze all aspects of the application, follow applicable industry standards, and follow the information concerning the product in the current product catalog and in any other materials provided from Parker or its subsidiaries or authorized distributors.

To the extent that Parker or its subsidiaries or authorized distributors provide component or system options based upon data or specifications provided by the user, the user is responsible for determining that such data and specifications are suitable and sufficient for all applications and reasonably foreseeable uses of the components or systems.

## **Offer of Sale**

Please contact your Parker representation for a detailed "Offer of Sale".

# INTRODUCTION

## With through drive for single and multiple pumps

Swash plate type for open circuit

## Technical Features

- Low noise level
- Fast response
- Service-friendly
- High self-priming speed
- Compact design
- Through drive for 100 % nominal torque

## General Information

### Fluid recommendations

Premium quality hydraulic mineral fluid is recommended, like HLP oils to DIN 51524 (part 2 & 3) or ISO6743/4 (HM & HV). Brugger-value recommended to be 30 N/mm<sup>2</sup> minimum for general application and 50 N/mm<sup>2</sup> for heavily loaded hydraulic equipment and fast cycling machines and/or high dynamic loads, measured in accordance with DIN 51 347-2. See also Document MSG30-3248/UK Parker Hydraulic Fluids.

### Viscosity

The normal operating viscosity should range between 16 and 100 mm<sup>2</sup>/s (cSt). Max. start-up viscosity is 1000 mm<sup>2</sup>/s (cSt).

### Filtration

For maximum pump and system component functionality and life, the system should be protected from contamination by effective filtration.

Fluid cleanliness should be in accordance with ISO classification ISO 4406:1999. The quality of filter elements should be in accordance with ISO standards.

General hydraulic systems for satisfactory operation: Class 20/18/15, according to ISO 4406:1999

Recommended cleanliness for maximum component life and functionality: Class 18/16/13, according to ISO 4406:1999

### Seals

Check hydraulic fluid specification for chemical resistance of seal material.

Check temperature range of seal material and compare with max. system and ambient temperature.

|                               |               |
|-------------------------------|---------------|
| N – Nitrile (FKM shaft seal)  | -25...+ 90 °C |
| V – FKM (FKM shaft seal)      | -25...+115 °C |
| W – Nitrile (PTFE shaft seal) | -30...+ 90 °C |

**Note:** The highest fluid temperature will be at the drain port of the pump, up to 25 K higher than in the reservoir.

**Note:** The maximum temperature in the leakage volume is limited to +75 °C for all pumps equipped with a CIP sensor.

| L    | metric, Ø 160 mm                       | MK-PVBG3Lxx                  |

See dimensions for details

<sup>8)</sup> to be ordered separately as single part see page 67.

<sup>4)</sup> Drain and flushing ports

<sup>5)</sup> All mounting and connecting threads

<sup>6)</sup> For PV063-PV092 only: pressure port 1 1/4" with 4 x M14 instead of 4 x M12

<sup>7)</sup> for mounting interface K and L only

Standard pump is not painted. Black painted pump and ATEX (excludes electronic components) certification (Zone 2) is available as special option. For additional informations please contact Parker Hannifin.

|                              |   | R | Prop.-pilot valve PVACRE*35T with OBE mounted, command signal 4 - 20 mA                              |                   |

## Remark:

As torque is pretty much speed independent power at alternative speeds can get recalculated to 1500 rpm for code selection easily.

## Example:

Your engine allows  
90 kW @ 1800 rpm →  
 $\frac{90 \text{ kW}}{1800 \text{ rpm}} \times 1500 \text{ rpm} = 75 \text{ kW}$

→ select a first digit "Y"-control.

# PRESSURE CONTROLS

## Standard Pressure Control

### Control option MMC

The standard pressure control adjusts the pump displacement according to the actual need of flow in the system in order to keep the pressure constant.

### Control schematics

**Note:** Upgrade to the MRC control by simply removing the ISO 6149 M14x1.5-plug. Thread adapters PVCCK\*\* (last two digits defining seal and thread) are available separately if required. PVCCKN1 for ex. for NBR-sealed and towards G1/4 BSPP. Please consult spares list for all further versions.

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

|       | Time on-stroke [ms] |                 | Time de-stroke [ms] |                     |
|-------|---------------------|-----------------|---------------------|---------------------|
|       | against 50 bar      | against 350 bar | zero stroke 50 bar  | zero stroke 350 bar |
| PV360 | 520                 | 180             | 120                 | 82                  |

|                                        |                  |
|----------------------------------------|------------------|
| Pressure adjustment range              | 15 to 420 bar    |
| Factory setting pressure               | 50 bar           |
| Differential pressure adjustment range | 10 to 40 bar     |
| Factory setting differential pressure  | 15 bar           |
| Control oil consumption                | Max 8.0 l/min    |
| Typical pilot flow                     | approx 1.5 l/min |

# PRESSURE CONTROLS

## Standard Pressure Control with NG6 Interface

### Control option MM1

With code MM1 the standard pressure control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

## Standard Pressure Control with Electrical Unloading

### Control option MMW

With code MMW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

## Standard Pressure Control with Proportional Pilot Valve

### Control options MMK, MMF and MMR

With code MMK a proportional pilot valve of type PVACRE... K35 (see page 43) is mounted on the top side interface. Options with codes MMF and MFR are equipped with a proportional pilot valve of type PVACRE...35T featuring integrated electronics.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

## Standard Pressure Control without Integrated Pressure Pilot Valve

### Control option MMZ

Control MMZ has no integrated pilot valve but a valve interface NG6 DIN 24340 on the top.

This version is recommended for valve accessories.

For operation at >350 bar please select respective valve accessories (see page 40)

# PRESSURE CONTROLS

## Remote Pressure Control

### Control option MRC

The remote pressure control adjusts the pump displacement according to the actual need of flow in the system

in order to keep the pressure constant at a level given by a remotely installed pilot valve.

### Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

|       | Time on-stroke [ms] |                 | Time de-stroke [ms] |                     |
|-------|---------------------|-----------------|---------------------|---------------------|
|       | against 50 bar      | against 350 bar | zero stroke 50 bar  | zero stroke 350 bar |
| PV360 | 520                 | 180             | 120                 | 82                  |

|                                        |                  |
|----------------------------------------|------------------|
| Pressure adjustment range              | 15 to 420 bar    |
| Factory setting pressure               | 50 bar           |
| Differential pressure adjustment range | 10 to 40 bar     |
| Factory setting differential pressure  | 15 bar           |
| Control oil consumption                | Max 8.0 l/min    |
| Typical pilot flow                     | approx 1.5 l/min |

# PRESSURE CONTROLS

## Remote Pressure Control with NG6 Interface

### Control option MR1

With code MR1 the remote pressure control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

## Remote Pressure Control with Electrical Unloading

### Control option MRW

With code MRW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

## Remote Pressure Control with Proportional Pilot Valve

### Control options MRK, MRF and MRR

With code MRK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface. Options with codes MRF and MRR are equipped with a proportional pilot valve of type PVACRE...35T featuring integrated electronics.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

## Remote Pressure Control without Integrated Pressure Pilot Valve

### Control option MRZ

Control MRZ has no integrated pilot valve but a NG6 DIN 24340 interface topside.

### Control option MRB

Control MRB has no integrated pilot valve.

This version is recommended for valve accessories.

# LOAD SENSING CONTROLS

## Load Sensing Control

### Control option MFC

The pilot pressure of the load sensing control is taken from a load sensing port in the hydraulic system. It is

used to match pump flow to system demands. Integrated pilot valve allows pmax adjustment.

### Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

|       | Time on-stroke [ms] |                     | Time de-stroke [ms] |                     |
|-------|---------------------|---------------------|---------------------|---------------------|
|       | stand-by to 50 bar  | stand-by to 350 bar | 50 bar to stand-by  | 350 bar to stand-by |
| PV360 | 500                 | 690                 | 830                 | 50                  |

|                                        |                  |
|----------------------------------------|------------------|
| Pressure adjustment range              | 15 to 420 bar    |
| Factory setting pressure               | 50 bar           |
| Differential pressure adjustment range | 10 to 40 bar     |
| Factory setting differential pressure  | 10 bar           |
| Control oil consumption                | Max 8.0 l/min    |
| Typical pilot flow                     | approx 1.5 l/min |

# LOAD SENSING CONTROLS

## Load Sensing Control with NG6 Interface

### Control option MF1

With code MF1 the remote pressure control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

## Load Sensing Control with Electrical Unloading

### Control option MFW

With code MFW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

## Load Sensing Control with Proportional Pilot Valve

### Control options MFK, MFF and MFR

With code MFK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface. Options with codes MFF and MFR are equipped with a proportional pilot valve of type PVACRE...35T featuring integrated electronics.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

## Load Sensing Control without Integrated Pressure Pilot Valve

### Control option MFZ

Control MFZ has no integrated pilot valve but a NG6 DIN 24340 interface topside.

This version is recommended for valve accessories.

### Control option MFB

Control MFB has no integrated pilot valve.

# LOAD SENSING CONTROLS

## 2 Spool Load Sensing Control

### Control option MTP

The pilot pressure of the load sensing control is taken from a load sensing port in the hydraulic system. It is used to match pump flow to system demands. With the 2

spool control the interaction of the two control functions is avoided by using two separate control valves for flow and pressure compensation.

### Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

|       | Time on-stroke [ms] |                     | Time de-stroke [ms] |                     |
|-------|---------------------|---------------------|---------------------|---------------------|
|       | stand-by to 50 bar  | stand-by to 350 bar | 50 bar to stand-by  | 350 bar to stand-by |
| PV360 | 920                 | 670                 | 1000                | 170                 |

|                                                         |                  |
|---------------------------------------------------------|------------------|
| Pressure adjustment range                               | 15 to 420 bar    |
| Factory setting pressure                                | 50 bar           |
| Differential pressure adjustment range                  | 10 to 40 bar     |
| Factory setting differential pressure load sensing      | 10 bar           |
| Factory setting differential pressure, pressure control | 15 bar           |
| Control oil consumption                                 | Max 8.0 l/min    |
| Typical pilot flow                                      | approx 1.5 l/min |

# HORSE POWER/TORQUE CONTROLS

## Horse Power/Torque Controls with Pressure Control

### Control option \*LC

The horse power control type \*L\* provides the benefit of the pressure control, plus the ability to limit the input power the pump will draw. These controls are beneficial when the power available from the prime mover for the

hydraulics is limited or the application power demand has both high flow/low pressure and low flow/high pressure duty cycles.

### Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

|       | Time on-stroke [ms] |                 | Time de-stroke [ms] |                     |
|-------|---------------------|-----------------|---------------------|---------------------|
|       | against 50 bar      | against 350 bar | zero stroke 50 bar  | zero stroke 350 bar |
| PV360 | 90                  | 90              | 100                 | 100                 |

|                                        |                  |
|----------------------------------------|------------------|
| Pressure adjustment range              | 15 to 350 bar    |
| Factory setting pressure               | 350 bar          |
| Differential pressure adjustment range | 10 to 40 bar     |
| Factory setting differential pressure  | 15 bar           |
| Control oil consumption                | Max 8.0 l/min    |
| Typical pilot flow                     | approx 1.5 l/min |

See Horse Power characteristic curves on page 30

# HORSE POWER/TORQUE CONTROLS

## Horse Power/Torque Control with NG6 Interface

### Control option \*L1

With code \*L1 the horse power control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

## Horse Power/Torque Control with Electrical Unloading

### Control option \*LW

With code \*LW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

## Horse Power/Torque Control with Proportional Pilot Valve

### Control options \*LK, LF and LR

With code \*LK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface. Options with codes \*LF and \*LR are equipped with a proportional pilot valve of type PVACRE...35T featuring integrated electronics.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

## Horse Power/Torque Control without Integrated Pressure Pilot Valve

### Control option \*LZ

Control \*LZ has no integrated pilot valve but a NG6 DIN 24340 interface topside.

This version is recommended for valve accessories.

### Control option \*LB

Control \*LB has no integrated pilot valve.

# HORSE POWER/TORQUE CONTROLS

## Horse Power/Torque Controls with Load Sensing

### Control option \*CC

The horse power control type \*C\* provides the benefit of the load sensing control, plus the ability to limit the input power the pump will draw. These controls are beneficial when the power available from the prime mover for the

hydraulics is limited or the application power demand has both high flow/low pressure and low flow/high pressure duty cycles.

### Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

|       | Time on-stroke [ms] |                     | Time de-stroke [ms] |                     |
|-------|---------------------|---------------------|---------------------|---------------------|
|       | stand-by to 50 bar  | stand-by to 350 bar | 50 bar to stand-by  | 350 bar to stand-by |

|----------------------------------------|------------------|
| Pressure adjustment range              | 15 to 350 bar    |
| Factory setting pressure               | 350 bar          |
| Differential pressure adjustment range | 10 to 40 bar     |
| Factory setting differential pressure  | 15 bar           |
| Control oil consumption                | Max 8.0 l/min    |
| Typical pilot flow                     | approx 1.5 l/min |

See Horse Power characteristic curves on page 30

# HORSE POWER/TORQUE CONTROLS

## Horse Power/Torque Control with Load Sensing & NG6 Interface

### Control option \*C1

With code \*C1 the horse power control has a valve interface size NG 6 DIN 24340 (CETOP 03 acc. RP35H, NFPA D03) on the top side.

This interface allows the mounting of accessories like multiple pressure selectors without the need of external piping and valve mounting.

## Horse Power/Torque Control with Load Sensing & Electrical Unloading

### Control option \*CW

With code \*CW a solenoid operated directional control valve (D1VW002KNJW) for electrical unloading is mounted on the control top side.

When the solenoid is de-energised, the pump compensates at a stand-by pressure of typically 15 bar. When the solenoid is energised, the pump compensates at the pressure adjusted on the integrated pilot valve.

## Horse Power/Torque Control with Load Sensing & Proportional Valve

### Control options \*CK, \*CF and \*CR

With code \*CK a proportional pilot valve of type PVACRE...K35 (see page 43) is mounted on the top side interface. Options with codes \*CF and \*CR are equipped with a proportional pilot valve of type PVACRE...35T featuring integrated electronics.

This allows a variation of the pump compensating pressure between 20 and 350 bar by an electrical signal.

## Horse Power/Torque Control with Load Sensing without Integrated Pilot Valve

### Control option \*CZ

Control \*CZ has no integrated pilot valve but NG6 DIN 24340 interface topside.

### Control option \*CB

Control \*CB has no integrated pilot valve.

# PERFORMANCE CURVES

## Typical Horse Power/Torque Control Characteristics

# PERFORMANCE CURVES

## Typical Horse Power/Torque Control Characteristics

Speed :  $n = 1500 \text{ rev/min}$   
 Temperature :  $t = 50^\circ\text{C}$   
 Fluid : HLP, ISO VG46  
 Viscosity :  $\nu = 46 \text{ mm}^2/\text{s}$  at  $40^\circ\text{C}$   
 Pressure : Maximum 350 bar, depending on HP level

# ELECTRONIC P/Q CONTROLS

## Proportional Displacement Control

### Control option FDV

The proportional displacement control allows the adjustment of the pump's output flow by an electrical input signal. The actual displacement of the pump is monitored by an electronic displacement sensor and compared with the commanded displacement in an electronic control module PQDXXA-Z10. The command is given as an electrical input signal (0 – 10 V alternatively 4 – 20 mA) from the supervising machine control or a potentiometer.

### Control schematics

Response times of the pump are collected from a circuit as below by measuring the pumps swash angle movement at different pressures.

|       | Time on-stroke [ms] |                     | Time de-stroke [ms] |                     |
|-------|---------------------|---------------------|---------------------|---------------------|
|       | stand-by to 50 bar  | stand-by to 350 bar | 50 bar to stand-by  | 350 bar to stand-by |
| PV360 | 255                 | 154                 | 266                 | 183                 |

|                                          |               |
|------------------------------------------|---------------|
| Pressure adjustment range*               | 35 to 350 bar |
| Differential pressure adjustment range * | 10 to 40 bar  |
| Factory setting differential pressure *  | 15 bar        |
| Control oil consumption (FDV only)       | Max 0.3 l/min |

\* Data valid for UD\* version

Version FDV of the proportional control does not provide pressure compensation. Therefore the hydraulic circuit must be protected by a pressure relief valve.

**New CIP-Sensor**  
(contactless inductive position) eliminates drift due to wear and any manual sensor adjustments.

[Dashed line] = FDV included

### Dynamic characteristic of flow control \*

\* Curve shown exaggerated

| Internal pilot pressure required to control the pump |        |
|------------------------------------------------------|--------|
| FDV                                                  | 15 bar |
| UDR                                                  | 25 bar |
| UDK                                                  | 25 bar |
| UDM                                                  | 25 bar |

## Proportional Displacement Control with Overriding Pressure Control

Control version UDR provides electro-hydraulic displacement control and pressure stage mounted on an elbow manifold.

The diagram illustrates a hydraulic circuit. At the top, a 4/3-way directional control valve is shown in its center position, with ports P, T, A, and B. To its right is a 3/2-way valve with ports P, B<sub>22</sub>, and A. Below these is a hydraulic cylinder with two chambers, A and B. The cylinder is connected to the 4/3-way valve via lines labeled A and B. The 3/2-way valve is connected to the cylinder's B port. A pump, represented by a circle with an inscribed triangle, is connected to the P port of the 4/3-way valve. The pump's output line passes through a pressure tap (P) and a temperature tap (T) before reaching the valve. The pump is controlled by a solenoid valve (S) and a pressure tap (P). The system is connected to a main supply line (M<sub>P1</sub>) which has a pressure tap (P) and a temperature tap (T). The main supply line also has a pressure tap (P) and a temperature tap (T) before entering the pump. The cylinder's A port is connected to the main supply line via a pressure tap (P) and a temperature tap (T). The cylinder's B port is connected to the 3/2-way valve, which is in turn connected to the main supply line via a pressure tap (P) and a temperature tap (T). The main supply line also has a pressure tap (P) and a temperature tap (T) before entering the pump.

### Control option UDK

## Proportional Displacement Control with Closed Loop Pressure Control

### Control option UDM

Control version UDM includes pressure transducer Parker SCP 8181 CE. In combination with control module PQDXXA-Z10 both closed loop pressure control as well as electronic power limitation can be realized.

# EFFICIENCY & CASE DRAIN FLOWS

## Efficiency, power consumption

### PV016

### PV020

### PV023

## Efficiency and case drain flows PV016, PV020, PV023 and PV028

The efficiency and power graphs are measured at an input speed of  $n = 1500$  rpm, a temperature of  $50^\circ\text{C}$  and a fluid viscosity of  $30\text{ mm}^2/\text{s}$ .

Case drain flow and compensator control flow leave via the drain port of the pump. To the values shown are to be added 1 to 1.2 l/min, if at pilot operated compensators the control flow of the pressure pilot valve also goes through the pump.

**Please note:** The values shown below are only valid for static operation. Under dynamic conditions and at rapid compensation of the pump the volume displaced by the servo piston also leaves the case drain port. This dynamic control flow can reach up to 40 l/min! Therefore the case drain line is to lead to the reservoir at full size and without restrictions as short and direct as possible.

# PROPORTIONAL PRESSURE RELIEF VALVE PVACRE\*

## Proportional pressure relief valve PVACRE\*

The pressure relief valve PVACRE\* is a direct operated proportional valve, which is typically used for a remote pressure control.

### Function

When the pressure in port P exceeds the pressure setting at the solenoid, the cone opens to port T and limits the pressure in port P to the adjusted level. The optimum performance can be achieved in combination with the digital amplifier module PCD00A-400.

# PROPORTIONAL PRESSURE RELIEF VALVE PVACRE\*

## Ordering code proportional pressure relief valve

### Warning:

Risk of damaging bolt holes! Prior design series will need UNC bolts for pumps with threadcode "3".

## Schematic PVACRE\*

### Example for PVACRE\* mounted

## Dimensions PVACRE\*

# PROPORTIONAL PRESSURE RELIEF VALVE PVACRE\*T

## Proportional pressure relief valve with OBE PVACRE\*T

The direct operated proportional pressure valves of the RE06M\*T series with integrated electronics are based on the functionality of the PVACRE series. The digital onboard electronic are securely housed in a robust metal box and can also be used under harsh ambient conditions. The optimized linearization and the set valve parameters were specifically adapted to the pumps of the PVplus series.

Valve parameters can be adjusted and diagnostic valves displayed by using the ProPxD software and the optionally available parameterization cable.

### Function

When the pressure in port P exceeds the pressure setting at the solenoid, the cone opens to port T and limits the pressure in port P to the adjusted level.

|------|------|
| N    | NBR  |
| V    | FPM  |

| Code | Command signal |
|------|----------------|
| F    | 0...10 V       |
| R    | 4...20 mA      |

| Code | Nominal pressure |
|------|------------------|
| 35   | 350 bar          |
| 42   | 420 bar          |

### Warning:

Risk of damaging bolt holes! Prior design series will need UNC bolts for pumps with threadcode "3".

## Schematic PVACRE\*T

### Example for PVACRE\* T mounted

## Dimensions PVACRE\*T

# ELECTRONIC MODULE PQDXXA

## Features

- Digital control circuit
- Covers all displacements
- Covers all available functions (pressure, displacement, power)
- Predefined parameter sets (Plug & Play)
- Connection via USB cable (USB-A/USB-B)
- Ramp time up to 60 seconds
- Compliant to the relevant european EMC specifications
- Offline editing of parameter sets
- Error diagnosis
- Easy hands on control tuning due to online monitoring of PID gains
- All settings (ramps, MIN/MAX, control parameters) can be stored digitally and recalled from a PC to duplicate settings to other modules

## Programming software

The programming of the p/Q control module is done in an easy to learn mode. To select the pump model and size and to set the control parameters the program ProPVplus must be started. The program runs under common windows systems.

Latest software available at: [www.parker.com/pmde](http://www.parker.com/pmde)

## Features

- Display and documentation of parameter sets
- Save and reload of optimized parameter sets
- Offers oscilloscope function for easy performance evaluation and optimization
- Parameter sets for all PVplus pumps are pre-installed in the modules

# ELECTRONIC MODULE

## PQDXXA-PROFINET-Z10

### Features

- Control, monitor and parameter setting via Profinet ® interface
- Covers all displacements and controls (pressure, displacement, power)
- Quick and easy integration with available GSDML and predefined and online available function blocks for I/Os as well as parametrization
- Full integration into overlaying machine control (PLC + HMI) Process parameter, Static Parameter, Conditions
- Predefined data sets for Plug&Play commissioning
- Quick and easy wiring with Push in contact blocks
- Switch function with two RJ45 ports
- Alternative Connection via USB cable (USB-A/USB-B)
- Compatible to the relevant european EMC specification
- Certified by Profibus User Organisation
- Easy error diagnosis

### Programming software

The programming of the p/Q control module is done in an easy to learn mode. To select the pump model and size and to set the control parameters the program ProPVplus must be started. The program runs under common windows systems.

Latest software available at: [www.parker.com/pmde](http://www.parker.com/pmde)

### Features

- Display and documentation of parameter sets
- Save and reload of optimized parameter sets
- Offers oscilloscope function for easy performance evaluation and optimization
- Parameter sets for all PVplus pumps are pre-installed in the modules

# PVPLUS CONDITION MONITORING

## PVplus Condition Monitoring

Parker's Condition Monitoring Solution is added to a PVplus pump and consists of a PAC120 controller, a suite of sensors and an easy-to-install mounting kit to track and monitor PVplus under all operating conditions. This solution provides a cost-effective package to increase pump's lifespan and minimizes the risk of unplanned downtime in high availability applications.

## Key Features

- Anomaly Detection
- Threat Detection with Limits Checks and Warnings
- Live Data Monitoring
- Trend Data Tracking
- Graphical User Interface
- Communication Protocols  
(PROFINET, ETHERCAT, ETHERNET/IP)
- OPC UA functionality

# PUMP DIMENSIONS

## PV016-028, metric version

Interface for horse power cartridge or CIP Sensor for displacement feedback

Drain port L1 G1/2" (thread option 1)  
optional M22x1.5; ISO 6149-1  
(thread option 8)  
or 7/8" - 14 UNF (thread option 3)

The pump shown above has **Mounting option K** and **through drive variation T** (prepared for through drive)

**OUTLET for metric and SAE version:**  
flange acc. ISO 6162  
DN19; PN400

4xM10, 18 deep  
optional 3/8" - 16UNC-2B  
(thread options 3)

**INLET for metric and SAE version:**  
flange acc. ISO 6162  
DN32; PN250

4xM10, 18 deep  
optional 7/16" - 14UNC-2B  
(thread options 3)

**Mounting optional L**  
shaft splined metric  
W25x1.5x15x8f  
DIN 5480

Shown is a clockwise rotating pump with standard pressure compensator. Counter clockwise rotating pumps have inlet, outlet and gage port reversed.

# PUMP DIMENSIONS

## PV016-028, SAE version

Shown above is  
**Mounting option D**

**Mounting option E**  
Splined shaft 15T-16/32 DP,  
flat root, side fit ANSI B92.1

## Variation with through drive

### Through drive adaptors are available with the following dimensions

| Drawing Dimension    | A     | B    | C   | D    | E   | F   | G   | Remark       |
|----------------------|-------|------|-----|------|-----|-----|-----|--------------|
| Through drive option |       |      |     |      |     |     |     |              |
| A                    | 82.55 | 8    | -   | -    | -   | 106 | M10 | SAE A 2-Bolt |
| B                    | 101.6 | 10.5 | 127 | 89.8 | M12 | -   | -   | SAE B 4-Bolt |
| J                    | 100   | 10.5 | 125 | 88.4 | M10 | -   | -   | 4-Bolt       |

# PUMP DIMENSIONS

## PV032-046, metric version

Interface for power pilot cartridge  
or CIP Sensor for  
displacement feedback

Drain port L1; G3/4" optional M27 x 2;  
ISO 6149-1 (thread options 8)  
or 1 1/16" - 12 UNF (thread option 3)

Gage port M; ISO 6149-1 M14x1.5  
(for any thread option)

The pump shown above has  
**Mounting option K** and  
**through drive variation T**  
(prepared for through drive)

**Mounting optional L**  
splined shaft W32x1.5x20x8f  
DIN 5480

Shown is a clockwise rotating pump with standard pressure compensator. Counter clockwise rotating pumps have inlet, outlet and gage port reversed.

# PUMP DIMENSIONS

## PV032-046, SAE version

## Variation with through drive

At threads options 3 and 7 the dimensions E and G are UNC - 2B threads.

### Through drive adaptors are available with the following dimensions

| Through drive option | Drawing Dimension | A     | B    | C   | D     | E   | F   | G   | H  | K  | L   | Remark         |
|----------------------|-------------------|-------|------|-----|-------|-----|-----|-----|----|----|-----|----------------|
| A                    |                   | 82.55 | 8    | -   | -     | -   | 106 | M10 | 34 | 48 | 261 | SAE A 2-Bolt   |
| B                    |                   | 101.6 | 11   | 127 | 89.8  | M12 | 146 | M12 | 34 | 48 | 261 | SAE B 2/4-Bolt |
| C                    |                   | 127   | 13.5 | 162 | 114.6 | M12 | -   | -   | 49 | 63 | 276 | SAE C 4-Bolt   |
| J                    |                   | 100   | 10.5 | 125 | 88.4  | M10 | 140 | M12 | 34 | 48 | 261 | 2/4-Bolt       |
| K                    |                   | 125   | 10.5 | 160 | 113.1 | M12 | -   | -   | 34 | 48 | 261 | 4-Bolt         |

## PV 063-092, metric version

Drain ports L1, L2 and L3; G3/4"  
optional M27x2; ISO 6149-1  
(tread option 8) or 1 1/16" - 12 UNF  
(tread option 3)

1/2" NPT (for any thread option)

Key AS 12 x 8 x 76  
DIN 6885

Thread  
M12 - 28 deep

Bearing flushing port L4;  
G1/4" (thread options 1)  
optional M12x1.5; ISO 6149-1  
(thread options 8)  
or 7/16" - 20 UNF  
(thread options 3)

Dimensions: 121, 187.5, 13.5, 236, 252, 64, 26, 78, 43-0.25

The pump shown above has  
**Mounting option K**  
and **through drive variation T**  
(prepared for through drive)

**OUTLET for metric and SA version:**  
 flange according ISO 6162  
 DN 32; PN 400 bar  
 4 x M12, 20 deep  
 optional 1/2" - 13 UNC - 2B  
 (thread options 3)  
 or 4 x M14, 20 deep  
 (thread options 4)

**Mounting option L,**  
splined shaft  
W40 x 1.5 x 25 x 8f DIN 5480

Shown is a clockwise rotating pump with standard pressure compensator. Counter clockwise rotating pumps have inlet, outlet and gage port reversed.

## PV 140-180 Mounting options

### Mounting option K shaft keyed metric

### Mounting option D shaft keyed SAE

### Mounting option F shaft keyed SAE

### Mounting option L shaft splined metric

### Mounting option E shaft splined SAE

### Mounting option G shaft splined SAE

# PUMP DIMENSIONS

## PV 270, metric version

Mounting interface for horse power pilot or CIP for displacement feedback

Gage port M; ISO 6149-1 M14x1.5 (for any thread option)

The pump shown above has **Mounting option K** and **through drive variation T** (prepared for through drive)

**Mounting option L,**  
splined shaft  
W60 x 2 x 28 x 9g DIN 5480

Shown is a clockwise rotating pump with standard pressure control. Counter clockwise rotating pump have inlet, outlet and gage port reversed.

# PUMP DIMENSIONS

## PV 360, metric version

Mounting interface for horse power pilot or CIP for displacement feedback

Thread for transport: M12x1.75; 21 deep

The pump shown above has **Mounting option K** and **through drive variation T** (prepared for through drive)

**Mounting option L, T,**  
splined shaft  
W 70 x 3 x 22 x 8f DIN 5480

**mounting option R**  
pilot diameter Ø224 mm

Shown is a clockwise rotating pump with standard pressure control. Counter clockwise rotating pump have inlet, outlet and gage port reversed.

# PUMP DIMENSIONS

## PV 360 SAE Version

### Note:

The dimensions shown conform to ISO 3019/1 the actual hole dimensions conform to ISO 3019/2 (pitch Ø315, hole Ø26, see previous page) and cover ISO 3019/1 dimensions as well. Use washers when assembling pump.

## Variation with through drive

### Through drive adaptors are available with the following dimensions

| Drawing Dimension    | A     | B    | C     | D     | E   | F   | G   | Remark         |
|----------------------|-------|------|-------|-------|-----|-----|-----|----------------|
| Through drive option |       |      |       |       |     |     |     |                |
| A                    | 82.55 | 8    | -     | -     | -   | 106 | M10 | SAE A 2-Bolt   |

|      |                            | 14   | SAE B-B, 15T 16/32                                        |
|      |                            | 15   | SAE C, 14T 12/24                                          |
|      |                            | 16   | SAE C-C, 17T 12/24                                        |
|      |                            | 17   | SAE D+E, 13T 8/16                                         |
|      |                            | 18   | SAE F, 15T 8/16                                           |

Kit contains positions 1 (and 2 for keyed shaft).

\* For PV360 only

Availability of through drive flange and coupling please check with ordering code options per each pump size, starting at page 6

# THROUGH DRIVE – FLANGE LOAD LIMITATION

## Multiple Pump Combinations – Maximum Moment

Combinations of multiple pumps might require additional pump support to avoid high stress on the front mounting flange. Combinations of two PVplus pumps in the same frame size generally do not need additional support in an industrial application. For combinations of more pumps support is required.

In case of combinations of a PVplus pump with another type of pump it is recommended to calculate the moment for the combination and compare with the maximum moment in table 1 below.

$$\text{Moment } M = (L1 \cdot W1 + L2 \cdot W2 + L3 \cdot W3 + \dots)$$

**Note:** If the calculated moment M exceeds the maximum moment in table 1 below, additional pump support is needed

**Table 1: Maximum Moment and Pump Dimensions**

|                              |             | PV016-PV028 | PV032-PV046 | PV063-PV092 | PV140-PV180 | PV270 | PV360 |
|------------------------------|-------------|-------------|-------------|-------------|-------------|-------|-------|

## Important notice:

The max. allowable torque of the individual shaft must not be exceeded. For 2-pump combinations there is no problem because PV series offers 100 % through torque. For 3-pump combinations (and more) the limit torque could be reached or exceeded.

Therefore it is necessary to calculate the resulting input as well as through drive torque.

# NOTES

Handwriting practice lines consisting of 30 horizontal dotted lines.
